MICROSOFT DATACENTER

Trusted Infrastructure

Authenticate and access using your preferred **Microsoft login.**

Transport Layer Security (TLS) encryption between Office 365 and Crossware Mail Signature Service.

Built **on Microsoft Azure infrastructure** to ensure compliance with international best practice and security standards.

Implemented using best practice with **GEO redundancy** and **backup services** globally.

World's Best Signature Designer

Configure signatures using our dual mode WYSIWYG / HTML Signature Designer.

Design your signature from a template, or create your own.

Configurable WAAD (Active Directory) field lookups.

Append signatures from any device or app, including mobile.

Unique Features

Signature Blocks

Design your signatures using conditional blocks.

e.g. marketing block, contact details block or address block.

Rule Builder

Apply signatures and signature blocks based on custom rules.

e.g. make a rule based on date range, subject line and email content.

Real-time Preview

Onscreen real-time preview of your signature for a specific user (pinnable).

e.g. check how your signature will look to a client before applying.

Custom Signature Placement

Add signatures to the email header, middle or footer.

e.g. your logo in the header, and contact details in the footer.
